In [ ]:

```python
# Print to show the preformance of each approach
print(f"Result of Rule-based approach\n{result_rule_based}\n")
print(f"Result of Word embeddings approach\n{result_word_embeddings}")
```

```
Result of Rule-based approach
{'Accuracy': '99.84%', 'Precision': '86.25%', 'Recall': '88.12%', 'F1 score
s': '86.97%'}

Result of Word embeddings approach
{'Accuracy': '99.84%', 'Precision': '86.25%', 'Recall': '88.12%', 'F1 score
s': '86.97%'}
```

Summary the performance of both approaches

From the results above, it's evident that both approaches perform equally well in detecting skills from job descriptions. However, the Word Embeddings approach demonstrates significantly faster execution, taking only 213 seconds compared to the Rule-based approach, which requires 3899 seconds.

Therefore, this case we should use Word Embeddings approach.
